

// JSX - JavaScript and XML

```
let ProductCard = <div>
  <div>{product.getTitle()}</div>
  <div>{product.getPrice()}</div>
</div>
```

→ '@babel/preset-react

```
{
  tag: 'div', props: {...}
  children: Array(2)
    0: {
      props: {
        children: Array(1)
          0: 'Wacom'
        length: 1
      }
      [[Prototype]]: Array(0)
      tag: 'div'
      [[Prototype]]: Object
    }
    1: {
      props: {
        children: [4500]
        [[Prototype]]: Object
        tag: 'div'
        [[Prototype]]: Object
        length: 2
      }
      [[Prototype]]: Array(0)
    }
  }
}
```

JS

```
let React = {
  createElement: (tag, props, ...children) => {
    var element = {tag, props: {...props, children}};
    return element;
  }
}
```
